

Emerging Issues Session Set For June Corn Utilization and Technology Conference

An Emerging Issues session is planned for this summer's 2008 Corn Utilization and Technology Conference in Kansas City, Mo., sponsored by the National Corn Growers Association. Session attendees will learn about current economic, environmental and carbon issues facing the bioprocessing/bioenergy industry.

“This new session to the CUTC program will focus on the critical issues facing the biorenewable industry today and into the future,” said Nathan Fields, NCGA Director of Research and Business Development. “We have pulled together experts in economics, policy, and science to educate those developing the technologies of tomorrow of just how unique this field has become. We believe it will highlight the challenges, and in turn, opportunities facing the industry.”

Scheduled presenters include Bill Hudson, ProExporter Network; Steffen Mueller, University of Illinois-Chicago; Roger Elmore, Iowa State University; and Darryl Banks, Noblis.

Scheduled for June 2-4 at the Kansas City Marriott Downtown, CUTC will emphasize the importance of identifying the next generation of technologies to sustain corn as nature's feedstock of the future. [Click here](#) for more information or to register.
